

# LETTUCE

## Growing Tips

Lettuce is a cool-season vegetable. For long-season lettuces, plant by sweet corn, staked tomatoes, pole beans for they will shade the lettuce during the hottest part of the day. Inter-planting lettuce within the row of later-maturing crops such as tomatoes and broccoli to save planting space.

**Temperature:** 60~90 °F (Will start to seed around 90°F)

**Soil:** Rich, well draining, with a pH about 5.5~6.8

**Exposure:** Full sun

### Growing with SaferGro®

#### Planting:

**PROMOT® MZM** - to supply micronutrients and increase seedling rate.

Application: Mix 2.5 oz. (5 Tsp.) with 5 gallons of water to water thoroughly the seeding media.

**SUPERGRO® 1-0-4** - to produce growth promoting substances.

Application: Mix 1.5-2.0 oz. (3-4 Tsp.) per gallon of water and apply every 4-6 weeks or as needed.

#### Growth Stage\*:

**HUMAX®** - to promote nutrient uptake by the plant and to increase water holding capacity of the soil.

Application: Mix 2 tsp. (0.34 oz.) per gallon of water and apply every 2-3 months or as needed.

**BIOMIN® MAGNESIUM** to improve photosynthesis.  
Application: Mix 3-4 tsp. (0.5-0.68 oz.) per gallon of water and apply every 2-3 months or as needed.

\*Choose from complete BIOMIN® series to correct mineral deficiencies.
