

# SWEET CORN

## Growing Tips

Pick your corn before it is cooked for the freshest taste. Once the corn is picked, the sugars turn to starch immediately.

**Temperature:** 50~95 °F

**Soil:** rich and well draining

**Exposure:** Full sun

\* Sow sweet corn in blocks rather than long rows for more successful pollination.

### Growing with SaferGro®

#### Planting:

**PROMOT® MZM** - to supply micronutrients and increase seedling survival rate.

Application: Mix 2.5 oz. (5 Tsp.) with 5 gallons of water to water thoroughly the seeding media.

#### Growth Stage:

**PHOSGARD 0-28-25** - for root development.

Application: Mix 2-4 tsp. in 1 gallon of water; apply every 2-3 months or as needed.

**HUMAX** - to promot nutrients intake; increases soil aeration.

Application: Mix 2 tsp. in 1 gallon of water; apply every 2-3 months or as needed.

**PENEX** - to condition soil for better water penetration and drainage.

Application: Mix 1 tsp. in 1 gallon of water; apply to soil every 2-3 months or as needed.

#### Flowering and Fruiting Stage:

**BIOMIN® BORON** - to improve flowering and fruit set, aids sugar accumulation in fruit.

Application: Mix 3-4 tsp. in 1 gallon of water. Repeat every 10 to 14 days throughout the season if needed.
