

STRAWBERRY

Growing Tips

Replace with new strawberry plants every three years. Switching to new planting bed to reduce pest population. Sweet corn is a good rotation plant for strawberries. Avoid following crops such as cucurbit, eggplant, melon, okra, potato or tomato to prevent Verticillium Rot.

Temperature: 60~75°F

Soil: Well draining, sandy loam with a pH about 5.8~6.2

Exposure: Full sun

Growing with SaferGro®

Before Planting:

Work enough amount of chicken manure, compost into soil
PROMOT® MZM - to supply micronutrients and increase transplant survival rate.

Application: Mix 2.5 oz. (5 Tsp.) with 5 gallons of water to water thoroughly.

Planting:

Apply enough amount of 10-10-10 fertilizer and use:

AQUA POWER™ - to boost early growth spurts.

Application: Mix 3-5 oz. (6-10 Tsp.) with 5 gallons of water and water in as needed.

Growth Stage*:

SUPERGRO® 1-0-4 - to produce growth promoting substances.

Application: Mix 1.5-2.0 oz. (3-4 Tsp.) per gallon of water and apply every 4-6 weeks or as needed.

Budding and Flowering Stage*:

BIOMIN® CALCIUM to increase fruit firmness.

Application: Mix 3-4 Tsp. (1.5-2.0 oz.) per gallon of water and apply every 2-3 months or as needed.

*Choose from complete BIOMIN® series to correct mineral deficiencies.
