

TOMATO

Growing Tips

Crop rotation is important for tomatoes. Don't plant tomatoes where you've grown them in the previous two years. Calcium and potassium are especially critical for fruit quality.

Temperature: 50~85 °F

Soil: Rich, well draining with a pH about 6.0~6.8

Exposure: Full sun, needs shading in very hot climates

Growing with SaferGro®

Seeding and Transplanting:

SUPERGRO® 1-0-4 - to stimulate germination and to promote plant growth.

Application: Mix 1.5-2 oz. per gallon of water then apply every 2-3 months or as needed.

PROMOT® MZM - to supply micronutrients and increase survival rate.

Application: Mix 2.5 oz. with 5 gallons of water to water thoroughly the seeding media.

BIOMIN® STARTER - to improve seedling survival; stimulates root growth and promotes healthy root system.

Application: Mix 2.5 oz. with 5 gallons of water to water thoroughly the seeding media.

Growth and Flowering Stage:

BIOMIN® micronutrients to correct mineral deficiencies.

Application: use as needed by following label instruction.

Fruiting Stage:

BIOMIN® CALCIUM to increase fruit firmness and storage time.

Application: Mix 3-4 tsp. per gallon of water and apply every 2-3 months or as needed.
